LOGIN

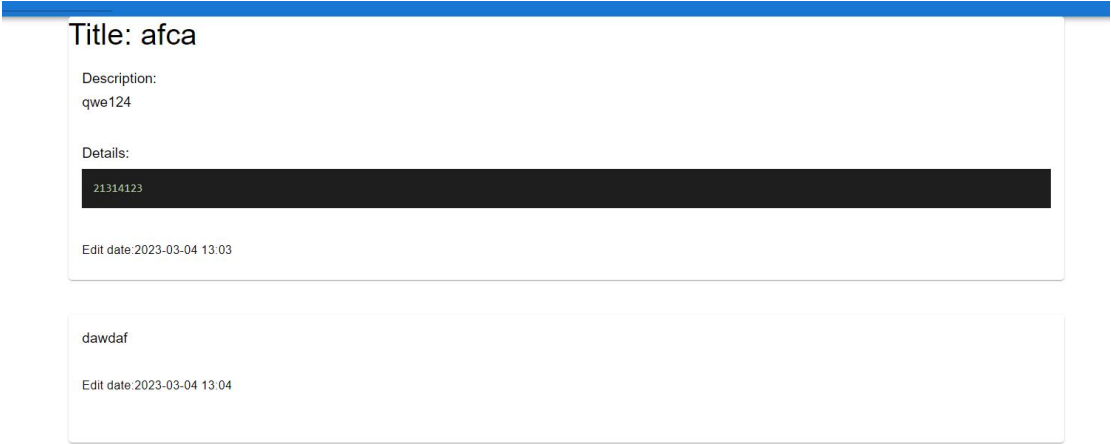

If you enter the wrong Account or password when logging in or registering, the program will return the corresponding error message.

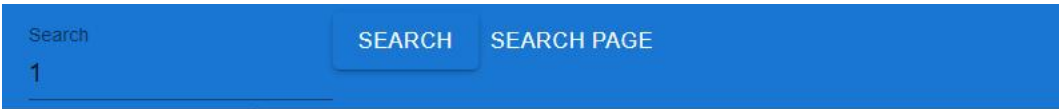

Clicking the LEARNMORE button on the showpage will jump to the corresponding POST, displaying the code and all comments

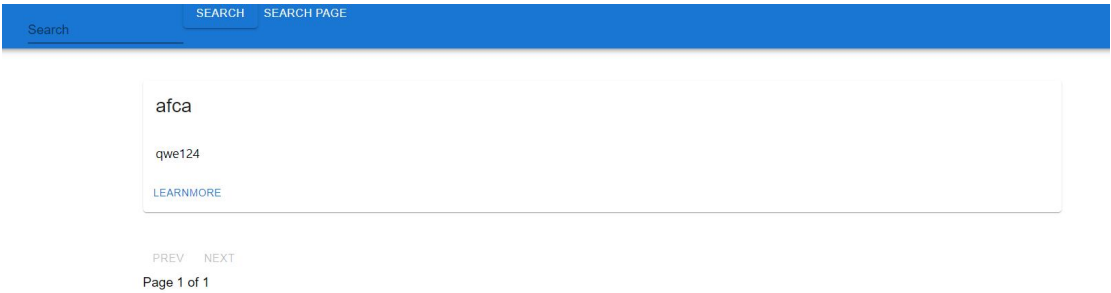

Users who are not logged in do not have any editing rights

Navigation bar has a search box to query the keywords of description, click the search button to find the corresponding content, SEARCHPAGE jump to the interface of the last query value.

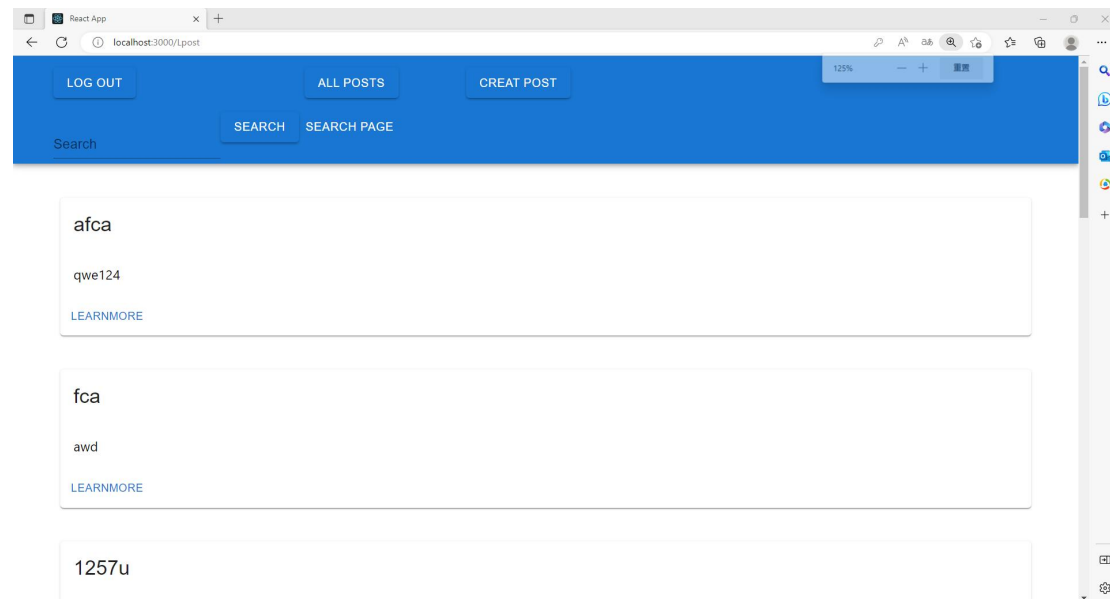

The query result is shown in the figure, you can also view the details of the post.

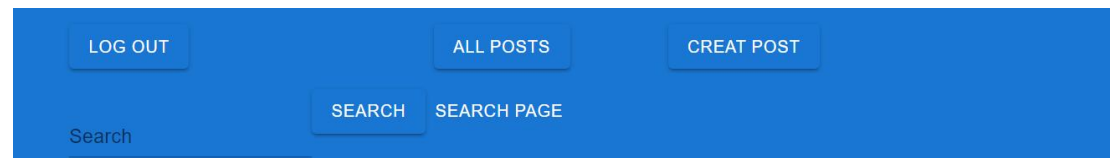

AFTER LOGIN

When the user logs in successfully, the following screen will be displayed:

The navigation bar is divided into two rows, the search function in the second row is the same as before login.

Click LOG OUT in the first line will exit the current account, ALL POSTS will return the page to the interface after the user logged in successfully, that is, the home page. Clicking CREAT POST will jump to the interface of creating POST.

The following is the creation of the POST interface, title, description, details are required to fill in the content, while the user must also choose a language to be able to submit the release.
