1,Install in the root directory.
$ npm i

2, configure client
In the root directory
$ cd client
$ npm i

3, configure server.
In the root directory
$ cd server
$ npm i

4, run the program
In the root directory: start server and client separately(By using two terminals)
    Open a Terminal:
    $ npm run dev:server
    Open a new Terminal
    $ npm run dev:client

5, if you want to use the automation test, directly in the root directory
$ cd Automate_testing
$ npx cypress open

Remember to start the program before starting the automated test which is to complete the 4！
